Minimalism.
Precision.
Durability.
Our steel systems are
designed for projects
that demand exceptional quality
and slim sightlines.

ABOUT US

We create steel-profile windows and doors that combine a modern appearance with exceptional durability. Our solutions are perfectly suited for homes, lofts, offices, and commercial properties alike.

Steel is a material for demanding customers — resistant to weather conditions, stable, and remarkably elegant. Thanks to slim profiles, we can create large glazed surfaces that allow more natural light into interiors while giving them a prestigious character.

We offer:

- steel windows with high thermal insulation,
- custom-made exterior and interior doors,
 - loft and industrial-style constructions,
- individual designs tailored to the client's needs,
 - professional consulting and installation services.

We focus on quality craftsmanship, precision in every detail, and modern production technologies. Our projects are a long-term investment — durable, secure, and timeless.

Choose steel windows and doors that will highlight the character of your space.

Contact us and create a project tailored to your expectations.

WINDOWS

Steel windows, as well as fire-resistant, are not only more safe, but also add character to space.

DOORS

Thanks to proven systems from companies: Ottostumm, Forster, Jansen, Furmaniak, and our systems we can create very small doors, as well as large-scale.

PRODUCT CATALOGUE

OTTOSTUMM W20/W40/W50/W75
